Whisper is Method For Sending Data In Private Channels To All Users, so We Can Set The Local State OR Temporary State Of Our Variables.

```
*****
```

To Listen for whisper-method events we can use `channel.listenForWhisper`-method:

```
const channel = Echo.private('app');  
  
channel.listenForWhisper('typing', event => {  
  console.log('Typing Data is: ', event);  
});
```
