

To enable the user agent in the settings.py file for all requests and for the project:

Crawl responsibly by identifying yourself (and your website) on the user-agent

```
USER_AGENT = "Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/148.0.0.0 Safari/537.36"
```

To set **headers** and **other related scraping work**, we can use a middleware.

```
yield response.follow(
    book_url,
    callback=self.parse,
    headers = { "User-Agent": self.USER_AGENTS[random.randint(0,
len(self.USER_AGENTS) - 1)]}
)
```

To create a specific feed for each spider, we can use **custom_settings**

In general, in the **settings.py** file, we can put:

```
FEEDS = {
    "booksdata.json": { 'format': 'json', 'overwrite': True }
}
```
