

After we select the chart:

- We can change the bold option.
- We can change the font size option
- And many more

We can change the data:

1. Select the chart.
2. Right-click, and choose "Select Data..."

After we select all the table data, the entries or series should be populated in the data source dialogue:

From the chart design, we can add data labels through the chart elements:

The Pie Chart and options from the + icon:

After selecting the data for the pie chart, we can add a background to it:

VLOOKUP: retrieve data based on a vertical column.

The nested If-Formula using **and-operator** & **or-operator**:

`=IF(OR([@[Good Credit?]]="Yes", [@[Employment Status]]="Full-Time"), "Approved", IF(AND(C3>650, [@[Loan Amount]]<12000), "Approved", "Denied"))`

The formula of VLOOKUP is:

=VLOOKUP(\$G3, Table1, 3, FALSE)

1. The **search value**
2. **Where to search** for the value
3. **The column index** that we want to display
4. Exact Matching (**False || 0**)

The screenshot shows an Excel spreadsheet with a VLOOKUP formula in cell I4: **=VLOOKUP(\$G4, Table1, 4, FALSE)**. The formula bar shows the formula is entered in cell I4. The spreadsheet contains two tables. The first table, 'Table1', is located in columns B through E and rows 2 through 12. The second table, 'Table2', is located in columns G through I and rows 2 through 4. Red arrows point to the 'Price' and 'Dividend' columns in both tables, and to the 'Price' column in the second table. The status bar at the bottom indicates 'Ready' and 'Accessibility: Investigate'.

Ticker	Company	Price	Dividend
Jloka-01	Jloka-100	\$ 2,787.00	\$ -
Jloka-02	Jloka-101	\$ 2,679.00	\$ 1.00
Jloka-01	Jloka-102	\$ 2,389.00	\$ -
Jloka-02	Jloka-103	\$ 664.00	\$ 2.00
Jloka-01	Jloka-104	\$ 1,900.00	\$ -
Jloka-03	Jloka-105	\$ 1,295.00	\$ 2.00
Jloka-01	Jloka-106	\$ 577.00	\$ 2.00
Jloka-03	Jloka-107	\$ 405.00	\$ 2.00
Jloka-04	Jloka-108	\$ 2,367.00	\$ -
Jloka-03	Jloka-109	\$ 2,695.00	\$ -

Ticker	Price	Dividend
Jloka-01	\$ 2,787.00	\$ -
Jloka-02	\$ 2,679.00	\$ 1.00
Jloka-03	\$ 1,295.00	\$ 2.00
Jloka-04	\$ 2,367.00	\$ -

The problem with the previous approach if we move the column.

And to solve it, we use **XLOOKUP**:

=XLOOKUP([@Ticker], **Table18**[Ticker], **Table18**[Dividend], "Missing")

The screenshot shows an Excel spreadsheet with two tables. The first table, located in columns B through E, has headers 'Ticker', 'Company', 'Price', and 'Dividend'. The second table, located in columns G through I, has headers 'Ticker', 'Price', and 'Dividend'. A formula bar at the top shows the formula **=XLOOKUP**([@Ticker], Table18[Ticker], Table18[Dividend], "Missing"). Red arrows point from the formula bar to the corresponding columns in the first table: B for Ticker, E for Dividend, and G for the Ticker column of the second table.

Ticker	Company	Price	Dividend
Jloka-01	Jloka-100	\$ 2,969.00	\$ 2.00
Jloka-02	Jloka-101	\$ 2,363.00	\$ 1.00
Jloka-01	Jloka-102	\$ 2,197.00	\$ 2.00
Jloka-02	Jloka-103	\$ 852.00	\$ -
Jloka-01	Jloka-104	\$ 935.00	\$ 1.00
Jloka-03	Jloka-105	\$ 363.00	\$ -
Jloka-01	Jloka-106	\$ 1,731.00	\$ 2.00
Jloka-03	Jloka-107	\$ 2,532.00	\$ 1.00
Jloka-04	Jloka-108	\$ 1,248.00	\$ 2.00
Jloka-03	Jloka-109	\$ 2,020.00	\$ 1.00

Ticker	Price	Dividend
Jloka-01	\$ 2,969.00	\$ 2.00
Jloka-02	\$ 2,363.00	\$ 1.00
Jloka-03	\$ 363.00	\$ -
Jloka-04	\$ 1,248.00	\$ 2.00

The formula of Match-function is: **=MATCH(I3, \$B\$3:\$B\$8,0)**

- **I3** is: the searching value
- The second **is the array where we want to search.**
- **The matching value.**

Month	Stock A	Stock B	Stock C	Index X	Index Y
23-Jan	\$ 135.00	\$ 252.00	\$ 335.00	\$1,250.00	\$2,350.00
23-Feb	\$ 145.00	\$ 219.00	\$ 333.00	\$1,300.00	\$2,400.00
23-Mar	\$ 120.00	\$ 244.00	\$ 335.00	\$1,350.00	\$2,450.00
23-Apr	\$ 130.00	\$ 237.00	\$ 341.00	\$1,400.00	\$2,500.00
23-May	\$ 133.00	\$ 242.00	\$ 365.00	\$1,450.00	\$2,550.00
23-Jun	\$ 133.00	\$ 213.00	\$ 346.00	\$1,500.00	\$2,600.00

Month	Security	Row #	Column #	Price
23-Feb	Stock C	\$B\$8,0	3	\$ 333.00
23-Feb	Stock B	2	2	\$ 219.00
23-Mar	Index X	3	4	\$ 1,350.00
23-Apr	Index X	4	4	\$ 1,400.00
23-Jun	Index Y	6	5	\$ 2,600.00

Month	Stock A	Stock B	Stock C	Index X	Index Y
23-Jan	\$ 135.00	\$ 252.00	\$ 335.00	\$1,250.00	\$2,350.00
23-Feb	\$ 145.00	\$ 219.00	\$ 333.00	\$1,300.00	\$2,400.00
23-Mar	\$ 120.00	\$ 244.00	\$ 335.00	\$1,350.00	\$2,450.00
23-Apr	\$ 130.00	\$ 237.00	\$ 341.00	\$1,400.00	\$2,500.00
23-May	\$ 133.00	\$ 242.00	\$ 365.00	\$1,450.00	\$2,550.00
23-Jun	\$ 133.00	\$ 213.00	\$ 346.00	\$1,500.00	\$2,600.00

Month	Security	Row #	Column #	Price
23-Feb	Stock C	=MATCH(I3,\$C\$2:\$G\$2,0)		333.00
23-Feb	Stock B	MATCH(lookup_value,lookup_array,[match_type])		
23-Mar	Index X	3	4	\$ 1,350.00
23-Apr	Index X	4	4	\$ 1,400.00
23-Jun	Index Y	6	5	\$ 2,600.00

The index formula is: =INDEX(\$C\$3:\$G\$8, K3,L3)

- The first is the array where to search.
- The second is the row number.
- The third is the column number.

The screenshot shows an Excel spreadsheet with two tables. The first table (left) lists stock prices for various months and indices. The second table (right) uses the INDEX formula to look up a price based on a row and column number.

Month	Stock A	Stock B	Stock C	Index X	Index Y
23-Jan	\$ 144.00	\$ 241.00	\$ 341.00	\$1,250.00	\$2,350.00
